

Liquid iron solutions that give you control over color, growth and turf response.

Iron is often associated with improving turf color, but its role in turf management goes much further.

The key is understanding what you want to achieve.

Pro-Iron brings together two specialist liquid iron products with distinct roles, giving turf managers different ways to incorporate iron into their management program.

Choose the right approach

Iron can form part of a nutrition program, supporting healthy growth and turf presentation, or it can be managed independently as a targeted agronomic input within an Integrated Turf Management (ITM) program.

Pro-Iron makes it easy to choose the right approach.

The right iron. The right outcome.

PRO-IRON®

PRO-IRON®

Pro-Iron Liquid Effect

Manage iron independently of the wider nutrition program.

Pro-Iron Liquid Effect is designed for turf managers who want to manage iron as a separate agronomic input, with application rates tailored to the turf response required.

Its broad tank-mix compatibility makes it easy to integrate into existing spray and Integrated Turf Management (ITM) programs.

Key benefits:

- **Independent iron management** – Apply iron according to the needs of the turf.
- **Tailored turf response** – Adjust application rates to suit specific agronomic and presentation objectives.
- **Excellent tank-mix compatibility** – Integrates easily with herbicides, fungicides, wetting agents, plant growth regulators and nutrition products.

FPR classification

PFC 1(C)(I)(b)(i) STRAIGHT LIQUID INORGANIC MACRONUTRIENT FERTILIZER

Analysis:

0-0-0 + 10 SO₃ + 7 Fe w/v

Iron sources

Iron sulphate & chelated iron

Pack sizes & coverage

- Pack size(s): 1 L, 10 L, 200 L
- Pack coverage: 10 L = 3,333 - 10,000 m²

Performance & use

- Turf response time: Within 1 hour
- Longevity: Up to 6 weeks
- Application rate: 10 - 30 L/ha
- Water volume: 300 - 1,000 L/ha
- Recommended usage period: Jan - Dec
- Areas of use: All turf areas

Every iron application starts with one question:
What does your turf need...

Improved presentation?

OR

Does it also need feeding?

Pro-Iron Liquid Effect:

Iron only

Choose when:

- You want flexibility to tailor iron inputs to your program and desired response
- You want iron to complement your existing nutrition program
- You want broad tank-mix compatibility within an existing spray program

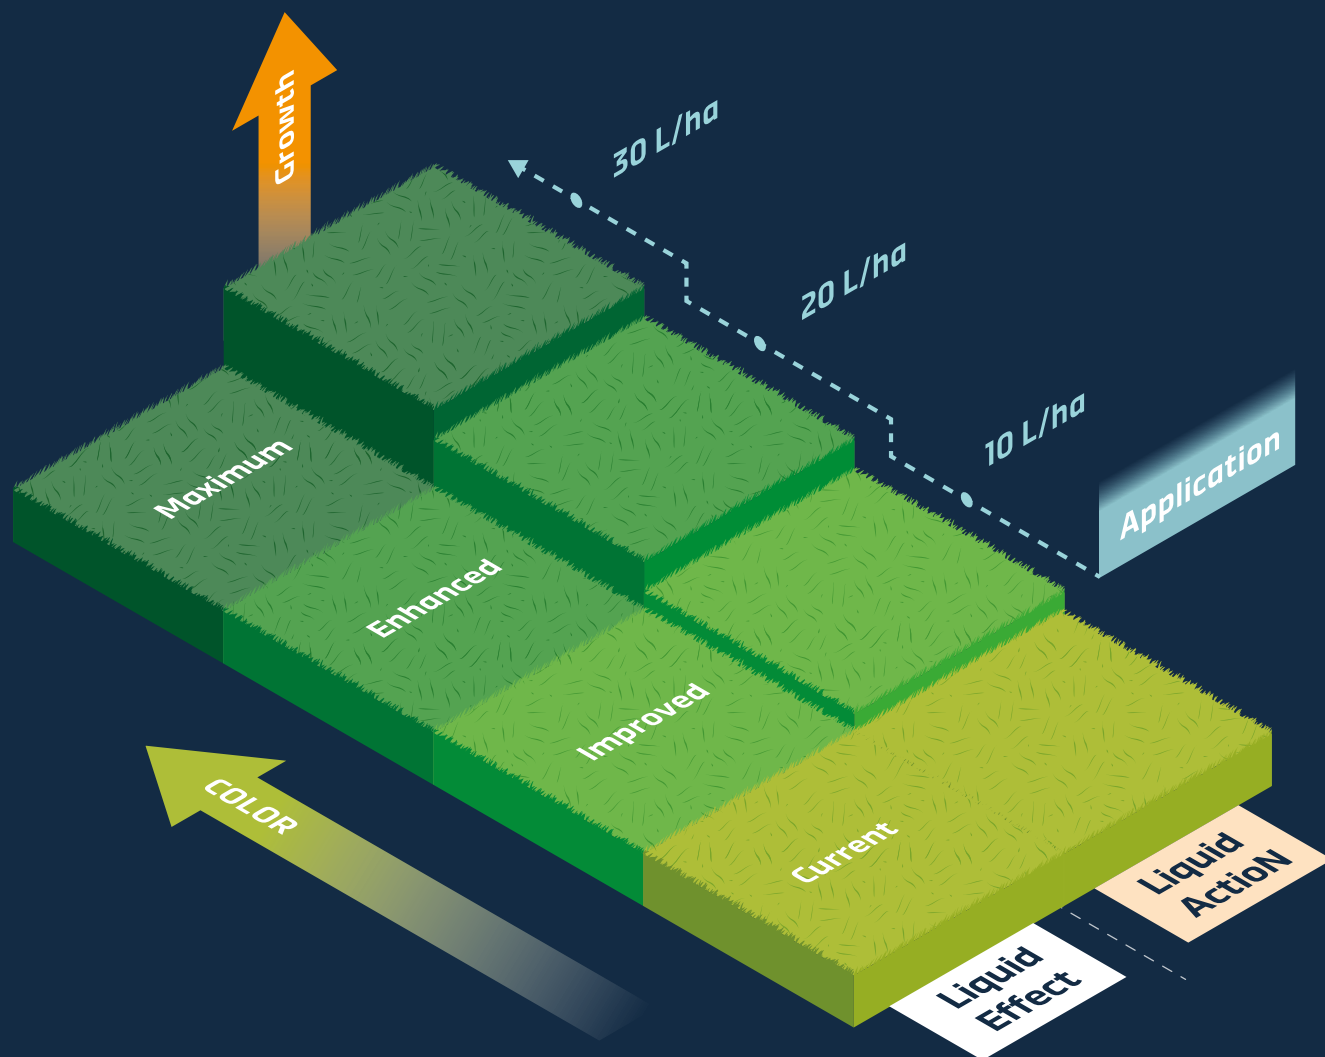

Pro-Iron Liquid Action:

Iron & nitrogen

Choose when:

- You want iron and nitrogen one application
- The turf needs feeding to support improved color and growth
- You are managing larger turf areas where efficiency and simplicity are priorities

Apply the appropriate Pro-Iron product at the corresponding rate to control your required effect.

PRO-IRON®

Pro-Iron Liquid Action

Improve turf color while supporting healthy growth in one efficient application.

Pro-Iron Liquid Action combines iron and nitrogen for turf managers who want to improve presentation while also applying nutrition.

It is designed for use where consistent turf response, healthy growth and efficient application are the priority.

Key benefits:

- **Iron and nutrition in one application** – Combines nitrogen and iron in a single treatment.
- **Improved turf color and presentation** – Delivers the iron input needed to enhance turf appearance.
- **Supports healthy growth** – Provides nitrogen to support consistent turf growth and performance.
