Greenmaster® Pro-Lite®

Cold Start

Early-season fertilizer for turf recovery in cool conditions

11	5	5	8
N	P_2O_5	K_2O	Fe

Description

Greenmaster Pro-Lite Cold Start is a mini-granule fertilizer designed to support early-season turf growth and recovery in cool spring conditions.

Its readily available nitrogen, phosphorus and potassium help turf recover from winter wear, preparation work and renovation when growth can still be limited by low temperatures.

The 8% iron content supports a strong color response, helping improve turf presentation while recovery is underway.

The 0.5-1.5 mm granules support even application at rates from 25-35 g/m², helping provide consistent nutrient distribution across managed turf at a time of year when accurate early-season feeding is important.

Guaranteed analysis

Oxide

N	Total Nitrogen	**11%**
	Ammoniacal nitrogen ($N\text{-}NH_4$)	5.5%
	Urea nitrogen (N-Urea)	5.5%
P_2O_5	Phosphorus Pentoxide	**5%**
	Water soluble (P_2O_5)	0.8%
K_2O	Potassium Oxide	**5%**
	Water Soluble (K_2O)	5%
Fe	Iron	**8%**

Benefits

- Supports early-season growth and recovery when cool conditions can limit turf response
- Readily available N, P and K help turf recover from winter wear, preparation work and renovation
- 8% iron supports a strong color response, helping improve turf presentation during recovery
- Micro-granular formulation supports even nutrient distribution at low application rates

Characteristics

Formulation type	Mini granule
Release	Conventional
Granule size	0.5-1.5 mm
Pack size	25 kg
Pack coverage	714-1,000 m²
Longevity	Up to 6 weeks
Typical turf response	Less than 7 days
Granule dispersal	3-4 days

Application rates

Recommended rate:

25-35 g/m2

Always trial on a small area before adjusting application rate or any other variables. As site conditions vary and application is outside ICL's control, responsibility for results rests with the user.

How to use

1. Apply to dry foliage and irrigate after 1-2 days if no rain has fallen.
2. Irrigation will aid dispersion and minimize any risk of mower pick-up on close-mown surfaces.
3. Avoid applying in frosty conditions or drought.
4. Water-in after application to minimize foot-printing risk.

5. Delay verti-cutting and/or grooming for 3 days after application to allow the granules to disperse.
6. Do not apply if there is a risk of contact with concrete, marble, stone, fabric, etc.
7. Brush off any spillages on paving slabs, concrete, clothes, etc. immediately, as product may cause discoloration.
8. If you need more information, please contact your technical support.

Technologies

Pro-Lite is ICL's soil-enhancing technology that incorporates zeolite minerals to improve nutrient retention and water management. It potentially boosts the soil's cation exchange capacity, enhances porosity, and supports consistent turf growth with reduced nutrient loss.

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
