

H2Pro®

TriSmart

 The optimum solution for turf moisture management

Description

H2Pro TriSmart is your premium turf root zone wetting agent. Proven to significantly reduce dry patch thanks to its exclusive triple-active formula. It provides greater water penetration, even root zone water spreading, and improved sandy root zone water retention capacity. Fight smarter, not harder, in the battle against localized dry patch.

Benefits

-  Prevents and cures against dry patch
-  Even moisture distribution through upper soil profile
-  Greatly reduces irrigation needs

Application rates

Recommended Rate:

10-25L /ha

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.

How to use

- 1 Apply from March to September depending upon conditions.
- 2 Apply with a high water volume or irrigate the wetting agent into your profile after use.
- 3 H2pro wetting agents can be applied, tank mixed with other Icl products, check tank mix table for compatibility.
- 4 Contact your local ICL representative for more information.

Recommended period of use

[illegible]

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
