ProSelect® Blends

Drought-Buster

Deep-rooting grass seed mixture for drought-prone and hard-wearing turf

Description

ProSelect Drought-Buster is a grass seed mixture developed for turf exposed to drought, heat and wear. It combines 85% Greenheaven tall fescue with 15% Traction smooth-stalked meadow grass.

Greenheaven tall fescue provides the majority of the mixture, combining deep rooting with tolerance to heat and dry conditions. This makes Drought-Buster particularly suited to drought-prone soils and areas where maintaining turf quality with limited water availability is important.

Traction smooth-stalked meadow grass adds wear tolerance and rhizomatous growth, supporting recovery and surface stability. Together, the two species provide a durable mixture for sports turf, polo and racecourses, lawns, landscaping and other areas exposed to periods of heat and limited rainfall.

Mixture content

85% Greenheaven Festuca arundinacea

15% Traction Poa pratensis

Benefits

- High tolerance to heat and drought
- Deep-rooting mixture suited to drought-prone soils
- Wear tolerance for sports and other high-use turf
- Rhizomatous growth supports recovery and surface stabilit

Application rates

Average sowing rate	42.5 g/m²

How to use

Mowing height: 20-35 mm.

Recommended period of use

Attention

Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results. Contact your ICL advisor for more detailed advice.
