

ProSelect[®]
Blends

Thermal Force

Grass seed blend for hot, dry and shaded conditions

Description

ProSelect Thermal Force is a grass seed blend developed for warm climates where high temperatures and limited rainfall or irrigation can restrict turf performance.

The selected cultivars combine strong heat and drought tolerance with good shade tolerance, helping the turf cope with a wider range of challenging growing conditions.

The blend also produces a dense, well-rooted sward, supporting surface stability and resilience once established.

Cultivars

- 50% Titanium GLS *Festuca arundinacea*
- 40% Avenger III *Festuca arundinacea*
- 10% Heatmaster Hybrid *Poa pratensis* (Coated)

Benefits

- Strong heat and drought tolerance for warm, dry conditions
- Good shade tolerance for areas with reduced light
- Dense growth supports a stable, resilient surface
- Deep rooting helps turf access moisture during dry periods
- Suitable for warm-climate turf with limited rainfall or irrigation

Application rates

Average sowing rate:

35 g/m²

How to use

Mowing height: 35-50 mm.

If you need more information, please contact your technical support.

Technologies

Smart Start is a seed coating technology that retains moisture and provides micronutrients around the seed, helping create better conditions for germination and early establishment.
