LANDSCAPER PRO[®] by ICL

Professional quality products made easy to use at home

Landscaper Pro is a range of lawn care products developed by ICL, a company whose products are widely used by greenkeepers and grounds staff at golf courses, stadiums, sports pitches and parks across the UK and Ireland. Now, the same professional quality is available to homeowners who want great results in their own garden.

Whether you're feeding your lawn, dealing with weeds or moss, fixing bare patches or putting down new seed, Landscaper Pro gives you everything you need to get the job done properly.

From smaller gardens to larger family lawns, the range is designed to be straightforward to use and deliver excellent results you can see.

Why choose Landscaper Pro?

- **Professional quality, made for home use**
Developed by ICL, whose products are trusted by turf professionals at leading golf courses, sports venues, racecourses and public green spaces across the UK and Ireland.
- **Easy to use, even if you're not an expert**
Takes the confusion out of what to use, when to use it and how much to apply.
- **Long-lasting results**
Feeds that work over several weeks, so you don't need to keep reapplying.
- **Complete lawn care in one range**
From feeding and seeding to spreading and patch repair, everything you need is in one place.

A lush garden scene with a white metal table and chairs, a lawn, and various plants and trees. The scene is bright and sunny, with shadows cast across the grass. In the foreground, there are vibrant red and yellow flowers. In the background, there are tall trees and a small statue.

Fertilisers

TRIPLE ACTION

Weeds and moss don't just spoil the look of your lawn – they compete with your grass for space and nutrients.

Nutrients are the essential elements your grass needs to grow well, stay green, and build strong roots. Landscaper Pro Triple Action takes care of all three jobs in one go. It kills weeds, controls moss, and feeds your lawn with the nutrients it needs to thrive.

What it does

- ✓ Feeds the lawn for steady, healthy growth
- ✓ Removes common lawn weeds
- ✓ Controls moss without needing a separate product
- ✓ Starts to work within a week and lasts for up to 6 weeks

Why use it

A single treatment saves time while helping your lawn grow stronger, greener, and more evenly.

When to apply

Use in spring or early summer, when weeds and moss are active and your grass is growing strongly.

How to apply

Apply evenly over the lawn using a spreader to achieve accurate coverage, then water in if conditions are dry.

Apply at 35g/m²

Coverage per pack: 428m²

MAPP: 17913, PCS: 05767

See our spreader range at the back of this brochure.

Tackle weeds, moss and feed your lawn – All in one go

Spreader settings

SPRING & SUMMER

As the weather warms up, your lawn needs a steady supply of nutrients to grow well and stay green.

Strong, steady feeding for spring and summer lawns

Spreader settings

Landscaper Pro Spring & Summer provides exactly that – feeding your grass gradually over several weeks, so you don't need to keep reapplying.

Nutrients are the building blocks that help your grass grow thicker, resist stress, and recover from wear. This fertiliser contains a balanced mix tailored for the warmer months, giving your lawn what it needs to stay in excellent condition from spring through summer.

What it does

- ✓ Provides a quick green-up so your lawn looks better within days
- ✓ Feeds steadily for up to 3 months with just one application
- ✓ Supports strong, healthy growth
- ✓ Promotes even colour and thickness across your lawn
- ✓ Ideal for busy homeowners who want reliable results without constant maintenance

Why use it

Keeps your lawn in good shape throughout spring and summer, without the need for repeat feeding every few weeks.

When to apply

Best used between April and August, during active grass growth.

How to apply

Apply evenly over the lawn using a spreader to achieve accurate coverage, then water in if conditions are dry.

Apply between 25 - 35g/m²

Coverage per pack:
Up to 600m²

See our spreader range at the back of this brochure.

AUTUMN & WINTER

As the temperature drops and growth slows down, your lawn still needs support.

Landscaper Pro Autumn & Winter is designed to prepare the grass for winter by building stronger roots and improving overall plant health.

This feed is lower in nitrogen but higher in potassium – a nutrient that helps strengthen the plant and improve resilience in cold, wet conditions. One application in late summer or autumn helps your lawn stay in good condition and sets it up to recover quickly in spring.

What it does

- ✓ Supports root strength and winter hardiness
- ✓ Helps grass cope with wet, cold and frosty conditions
- ✓ Feeds steadily for up to 3 months
- ✓ Encourages a quicker recovery when spring arrives

Why use it

A stronger lawn going into winter means fewer problems and a better-looking lawn when spring returns.

When to apply

Apply between late August and November, before the ground becomes too cold or saturated.

How to apply

Apply evenly over the lawn using a spreader to achieve accurate coverage, then water in if conditions are dry.

Apply between 25 - 35g/m²

Coverage per pack:
Up to 600m²

See our spreader range at the back of this brochure.

Help your lawn stay strong through colder weather

Grass seed

LANDSCAPER PRO SEED

If your lawn is looking thin or tired, reseeding is one of the best ways to bring it back to life.

Landscaper Pro Seed contains high-quality grass varieties that grow quickly, establish well, and deliver strong, long-lasting results.

Whether you're filling in bare patches, thickening up your lawn, or starting from scratch, this seed gives you a reliable base for healthier, better-looking grass.

What it does

- ✓ Grows fast and starts filling in within days
- ✓ Builds a lawn that stands up to regular wear and tear from walking, playing and general use
- ✓ Creates a dense, even surface
- ✓ Gives great results for both new lawns and overseeding

Why use it

It's an easy way to improve how your lawn looks and performs, with strong grass that holds up well under everyday use.

When to apply

Best sown in spring or early autumn, when there's warmth and moisture in the soil to help the seed establish.

Grass seed that grows fast and lasts

How to Overseed

Want to thicken your lawn or fill in sparse patches? Overseeding is an easy way to improve density and health without starting from scratch.

1. **Mow short** Cut your lawn to around 25mm and remove any clippings.
2. **Scarify** Use a rake to remove dead grass and help open up the soil surface.
3. **Loosen soil** For bare spots, lightly scratch the surface or add a thin layer of topsoil.
4. **Apply seed** Use 30–35g/m² for overseeding and 50g/m² for bare patches.

5. **Add fertiliser** A Landscaper Pro fertiliser can support quicker, stronger growth.

6. **Rake & water** Gently rake in the seed and water thoroughly. Keep the area moist.

7. **First mow** Once the new grass reaches 5–7cm, mow using a setting that leaves the grass relatively high (around 4cm or more).

Best Time to Seed

Spring (March to May) or Autumn (August to October)

Top Tips

- > Keep seeded areas moist daily for 2 to 3 weeks.
- > Avoid foot traffic while new grass establishes.
- > Overseed yearly for a thicker, healthier lawn.

Fix bare patches quickly and easily

QUICKSEED PRO

Bare spots can make even a well-kept lawn look tired.

QuickSeed Pro is a fast and simple way to repair those patches using a ready-mixed blend of grass seed, fertiliser and water-holding substrate – all in one bag.

There's no need to buy separate products or guess the right mix. Just shake it on, water it, and let it grow. It's ideal for small repairs and quick fixes where you want fast, visible results.

What it does

- ✓ Repairs bare patches with grass that grows quickly
- ✓ Feeds and supports new seedlings as they establish
- ✓ Conditions the soil to help the seed settle and take root
- ✓ Gives you everything you need in one easy-to-use mix

Why use it

It saves time, reduces mess and makes patching up your lawn straightforward – no measuring, no mixing, no fuss.

When to apply

Use in spring or autumn, when the soil is moist and the weather is mild enough for seed to grow.

How to apply

Start by removing any dead grass from the bare patches and lightly roughening the soil surface. Evenly sprinkle the product at a rate of 300 g/m² on bald spots or 150 g/m² on thinned areas. Water thoroughly after application and keep the surface moist for at least 10 days to encourage establishment. Once the new grass has grown, mow carefully, taking off no more than a third of the height at the first cut.

Spreaders

SHAKER PRO

Shake-on spreader for simple lawn care

The Shaker Pro is a straightforward handheld spreader designed for quick repairs and touch-ups.

It provides better spread quality than applying by hand, helping you distribute grass seed or fertiliser more evenly in smaller, detailed areas of your lawn.

Just fill it, shake gently, and go. No tools, settings or adjustments required.

What it does

- ✓ Provides more even coverage than tipping directly from the bag
- ✓ Reduces clumping and helps spread product consistently across small patches
- ✓ Delivers controlled output for precise application on edges and narrow strips

Why use it

For quick, targeted lawn care, the Shaker Pro offers a simple way to apply product more evenly without the need to set up a full-size spreader.

Best for

Quick lawn repairs in borders, small patches and narrow strips where larger tools aren't practical.

HANDY PRO

Quick and easy spreading for small areas

The Handy Pro is a lightweight handheld spreader that's ideal for treating smaller spaces, edges or areas that are hard to reach with a wheeled spreader.

With an adjustable dial and smooth turning handle, it gives you better control than scattering by hand.

What it does

- ✓ Delivers better spread quality than scattering by hand
- ✓ Helps apply product evenly in tighter spaces
- ✓ Gives you more control around edges and small sections

Why use it

Great for jobs where a full-size spreader isn't practical. It's quick, neat, and simple to control.

Best for

Small lawns, borders, or spot treatments.

Reliable and easy to use for medium-sized lawns

ACCUPRO ONE

The AccuPro One is a compact, well-built rotary spreader designed for regular lawn care jobs at home.

It's easy to push, simple to adjust, and ideal for applying fertiliser or seed across small to medium lawns.

The 20kg hopper holds enough product for most gardens, and the sturdy design gives you confidence that it'll last for many years. When the job's done, it stores away neatly without taking up much space.

What it does

- ✓ Applies fertiliser or seed across your lawn with ease
- ✓ 20kg hopper means fewer stops to refill
- ✓ Smooth to push and simple to adjust
- ✓ Compact and easy to store

Why use it

A dependable choice for regular use in medium-sized gardens. It offers solid build quality without the size or weight of larger models.

Best for

Medium lawns where quality, reliability and easy handling are all important

ACCUPRO 360ST

The AccuPro 360ST is built for consistent, accurate application.

Its SmartSpread™ Technology is designed to deliver an even spread pattern across the full width, helping to prevent stripes, gaps or build-up in any one area.

With a stainless-steel frame and large 30kg hopper, it's made for durability and ease of use in bigger gardens. Wide wheels handle uneven ground, and a weatherproof cover is included so it's ready to go whenever you are.

What it does

- ✓ SmartSpread™ Technology delivers a balanced, even spread across the full width
- ✓ Helps prevent striping, gaps or uneven product build-up
- ✓ Stainless steel frame provides strength and long-term reliability

- ✓ Large 30kg hopper reduces how often you need to refill
- ✓ Wide wheels and included rain cover for all-year use

Why use it

If you want professional-standard results with every application, the AccuPro 360ST gives you even coverage and build quality that lasts.

Best for

Larger lawns or regular use where spread quality really matters.
