

Phosphateplus[®]

P₂O₅	K₂O	SO₃	MgO	CaO
29%	5%	19%	2%	24%

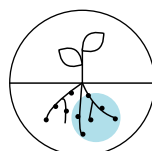

High quality Phosphate fertiliser providing five nutrients in a single application

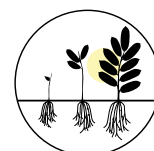

Ideal product for direct drilling

Boost establishment by stimulating root development and germination

Combined benefits of GTSP and Polysulphate in a single granule

Prolonged nutrient release to improve NUE and reduce leaching

Working together to help farmers increase productivity in a more sustainable way

Phosphateplus[®]

What is ICL Phosphateplus?

ICL Phosphateplus is a new, high quality granular fertiliser combining the benefits of triplesuperphosphate (GTSP) and Polysulphate into a single granule.

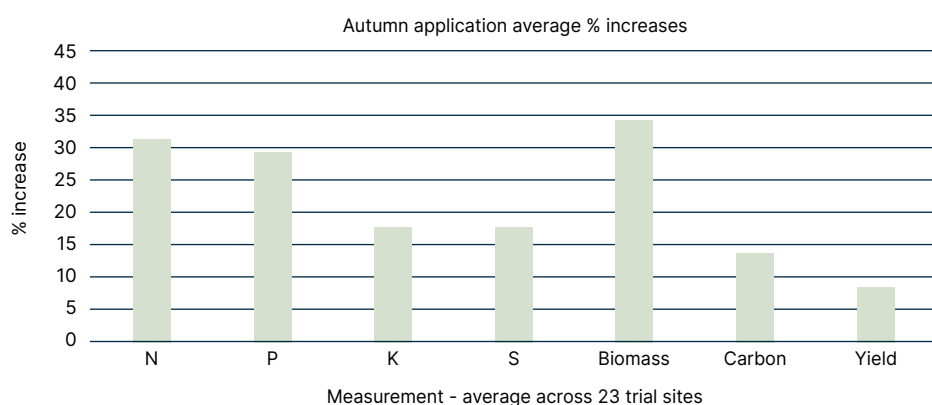

Phosphateplus supplies your crop with five essential nutrients in every granule, helping to increase the efficiency of your phosphate application and boost crop establishment and root growth.

Phosphateplus is a highly effective starter fertiliser that is suitable to be used in direct drilling, or spread up to 36M. Trials show that applying some K,S,Ca and Mg, together with some phosphate at planting, results in better crop establishment.

ICL Autumn Establishment Trials 2021/22

Objective

To investigate the benefits of using Phosphateplus on to winter wheat and barley. For establishment and increasing N & P uptake over the winter period.

P ₂ O ₅	K ₂ O	SO ₃	MgO	CaO

Crop recommendations

Wheat
and small grains
150-200 kg/ha

Potato
200-350 kg/ha

Oilseed rape (OSR)
150-200 kg/ha

Beans / Peas
1500 kg/ha

Sugarbeet
350 kg/ha

The recommendations are for general information purpose. Please consult your local agronomist in advance for specific advice.
