

ICL PKPLUS

Five nutrients. One granule.

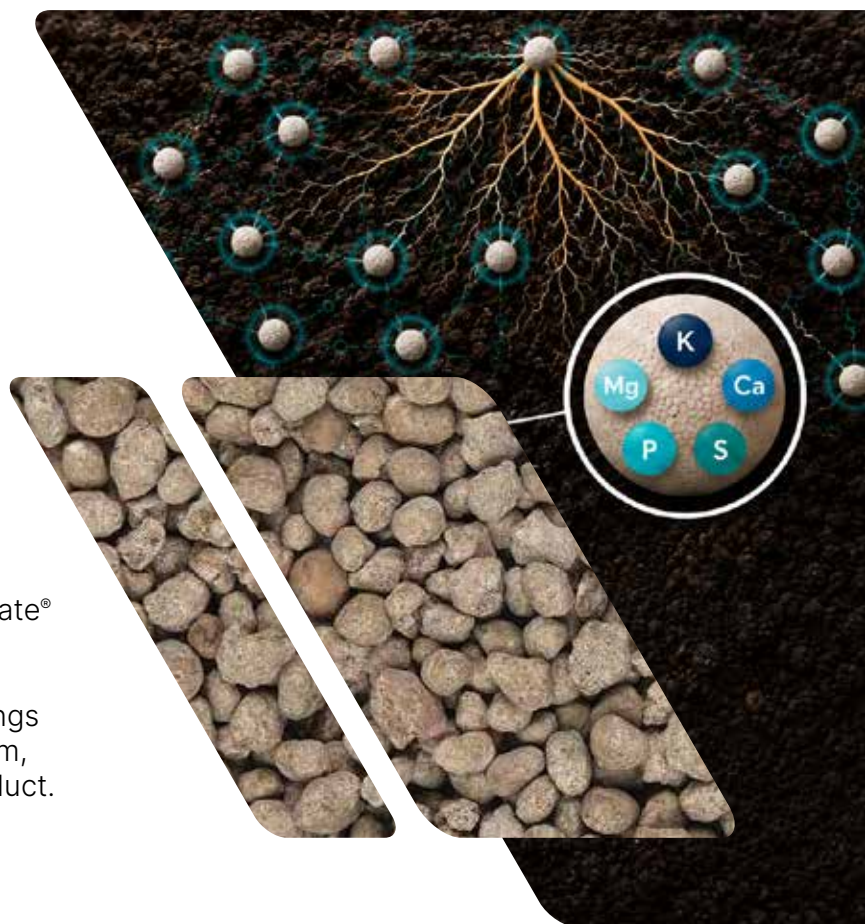

The 5-in-1 fertilizer solution for balanced, seed-safe crop nutrition.

ICL PKplus® combines natural mineral Polysulphate® with superphosphates into one uniform granule.

Ideal for seed row placement, this technology brings five essential nutrients, phosphorus, sulfur, calcium, potassium and magnesium together into one product.

Reduce the need to handle multiple nutrients and simplify your fertility program.

All you need to add is nitrogen.

WHY GROWERS ARE INTERESTED

SIMPLIFIED FERTILITY

Replace multiple products with one balanced granule for flexible N management. Plus reduced risk of leaching.

LESS TO HANDLE. MORE TO GAIN.

Fewer products to store, transport and apply, saving time and effort. Excellent spreadability via fall and spring broadcast or seed placed.

LOW SALT. SEED SAFE.

Low salt, low chloride, no liming effect and neutral pH help protect emergence and stand count in the seed row.

SULFUR THAT LASTS ALL SEASON LONG.

Gradual release of sulfate-based Mg, Ca, K and S to meet crop demand through-out the season. Improve nutrient synergy and support growth.

Learn how ICL PKplus can simplify your fertility program.

ICL PKPLUS

(0-24-6-15.4Ca-1.86Mg-9.1S)

ICL PKpluS®

Polysulphate® + Superphosphates

- The benefits of Polysulphate with 24% more phosphorus
- Improves nutrient synergy
- Provides quick release boost of phosphorus and gradual release of sulfate-based K, Mg, Ca and S

Just Add Nitrogen

Complementary Anhydrous Ammonia Fertility —

Efficiently plan spring fertility programs by pairing NH₃ with seed placed ICL PKpluS.

- ICL PKpluS may be placed with the seed
- Allows for flexible application, including seeder bin blending options
- Helps optimize the N:S ratio by focusing on N with NH₃ application, then zero in on sulfur requirements with ICL PKpluS

Polysulphate Canola

Trial Results

Seed Safety Study

Swan River, MB 2022

Polysulphate® compared to the control, applied with the seed at planting:

- increased canola stand by over 10%
- increased canola yield by over 25%

For trial information contact an ICL expert.

What is Polysulphate?

Polysulphate is a naturally occurring mineral, polyhalite.

ICL PKpluS is formulated with Polysulphate plus an additional 24% phosphorus. The Polysulphate component delivers the K, Ca, Mg and S in plant-available sulfate form. It is naturally gradual release, low salt and plant-available.
