

FertiFlow™

7-50-7+2Zn Fertilizer

 High phosphorous added with the power of Zn

5		45		5		TE
N		P ₂ O ₅		K ₂ O		

Description

In addition to the NPK nutrients, Fertiflow 7-50-7+2Zn has Zinc added as a nutrient to boost the yield of crops. Addition of Zinc in macronutrient formulations has become a popular agronomical practice as it allows a more uniform distribution of Zn into the soil. Traces of Zinc in crops lead to a better produce quality and also helps intensive production of staple crops.

Related technologies

PeKacid technology

It combines the advantages and efficiency of phosphoric acid with the ease and safety of a solid crystalline fertilizer. The use of PeKacid (an "acid-in-the-bag" product) replaces the conventional application of technical acids for agricultural use, resulting in an easier, safer and more effective fertilization process. Due to its acidic nature, PeKacid has an anti-clogging effect on irrigation systems and also enhances nutrients' uptake. ICL uses the PeKacid technology in many of their water-soluble formulations.

Benefits

 Useful in development, activation and elongation of roots

 Helps in inducing flower and fruit settings

 Prevents the Zn deficiency

 Suited mostly for alkaline soils due to low pH (3)

 Increased crop yield due to Zn

Application rates

Minimum Average

10kg/acre

Maximum Average

20kg/acre

It is advised to adjust the application rates beyond the suggested limit as per the crop's status and nutrient requirement. It is recommended to undertake a trial on a small scale before changing the application rate or any other variables, as circumstances can differ. As the recommended application rate might be beyond our control, hence, ICL cannot be held responsible for any adverse results.

How to use

- 1 Apply especially to fertigated crops
- 2 Store under dry conditions. Properly seal partly used or damaged bags

To be used primarily for Fertigation applications

Attention

Contact your ICL advisor for more detailed advice. Trial first on a small scale before changing the rate, application, or any other variables. As circumstances can differ and as the application of our products is beyond our control, ICL cannot be held responsible for any adverse results.
